

Vibe Research Document Pipeline Verification

Local Artifact Test

July 2026

Abstract

This document validates a real local artifact chain: LaTeX source, a compiled PDF, a Word document, and a generated diagram image.

1 Pipeline

The application invokes bundled or local document tools and preserves concrete outputs for inspection.

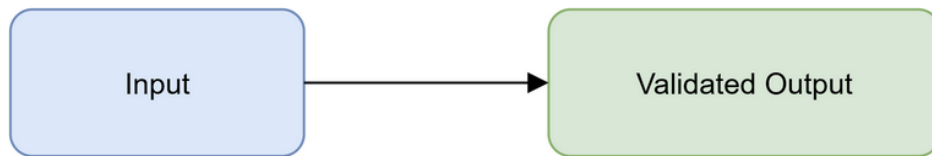

Figure 1: Locally generated document pipeline diagram.

2 Quality Gate

The PDF must open, contain at least one page, embed the diagram, and contain extractable text. The DOCX must contain document XML, media, relationships, and non-empty paragraphs.
